

Project: Dissecting Packets: From HTTP to TLS

1.HTTP Request

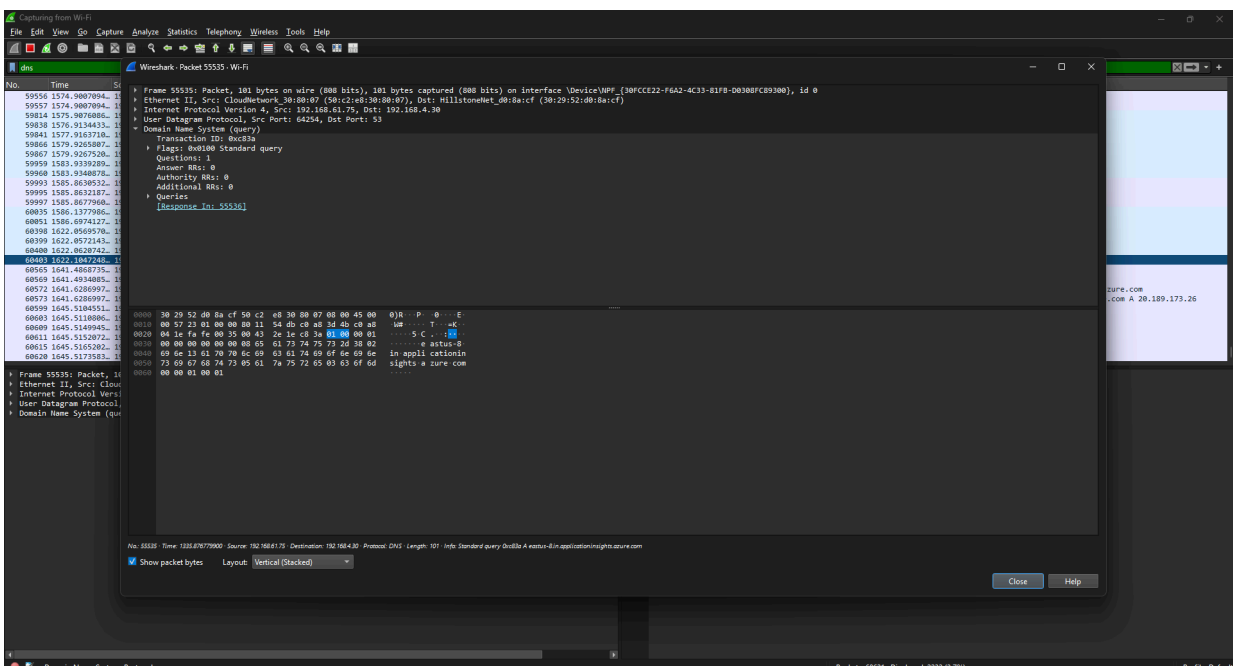

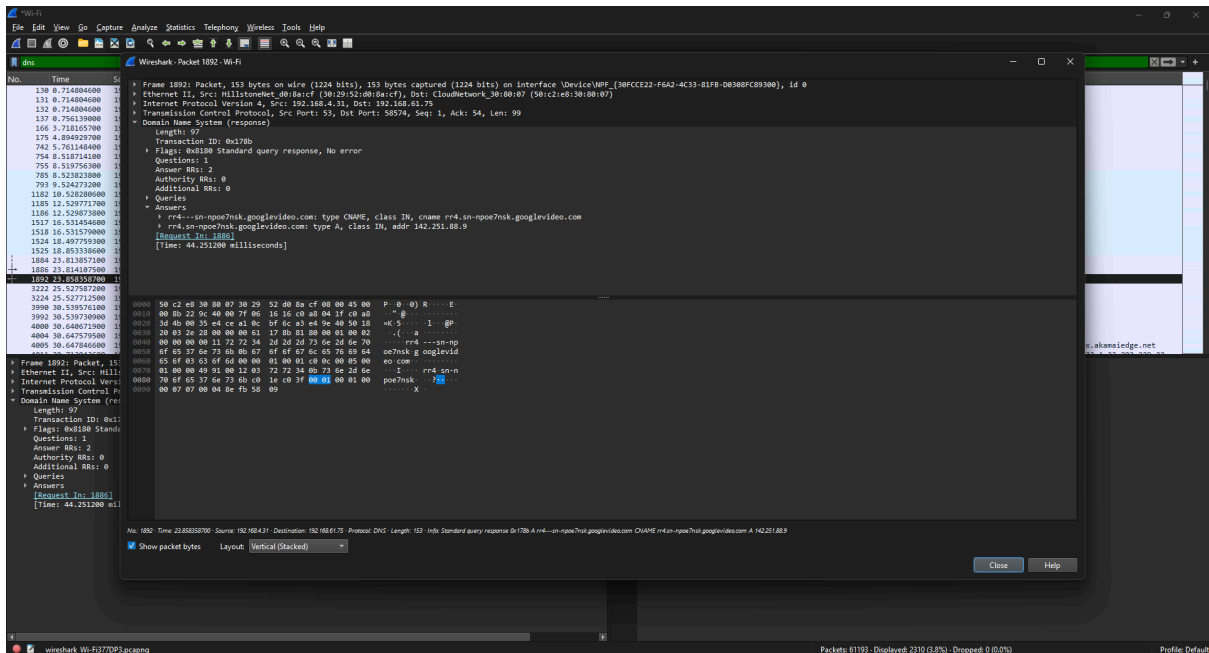

1. This packet shows the client (my computer) making an unencrypted HTTP GET request to the server to retrieve a webpage.

2. Request Method: GET

3. Destination Port: 80

2: DNS Query and Response

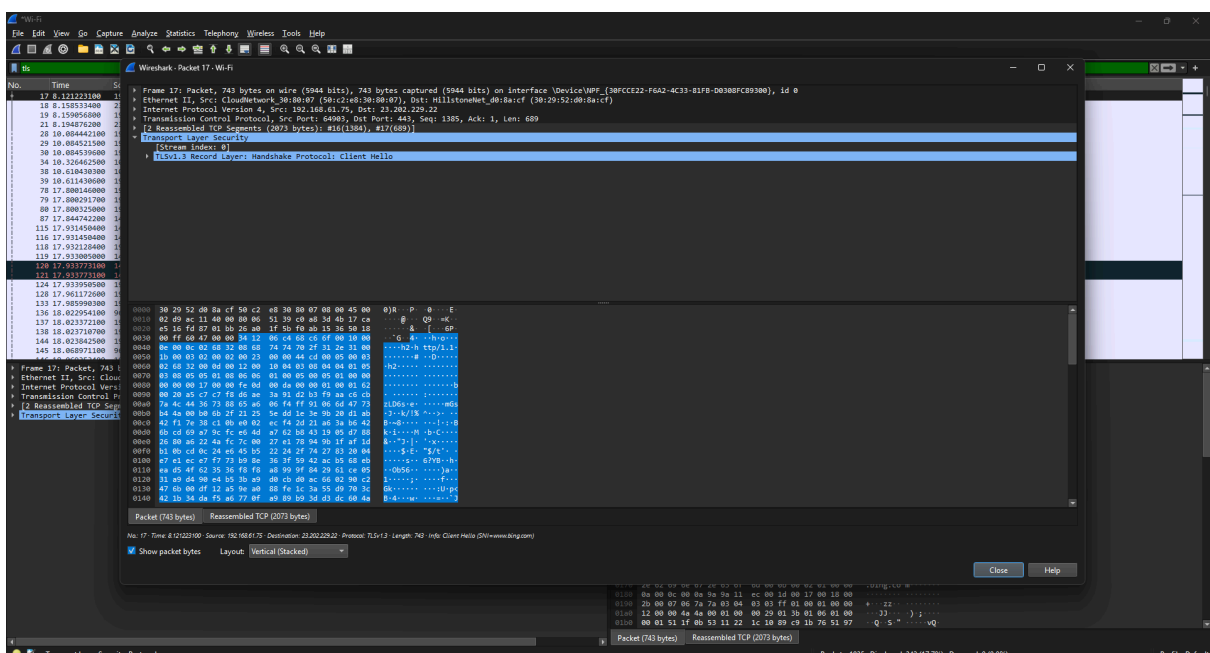

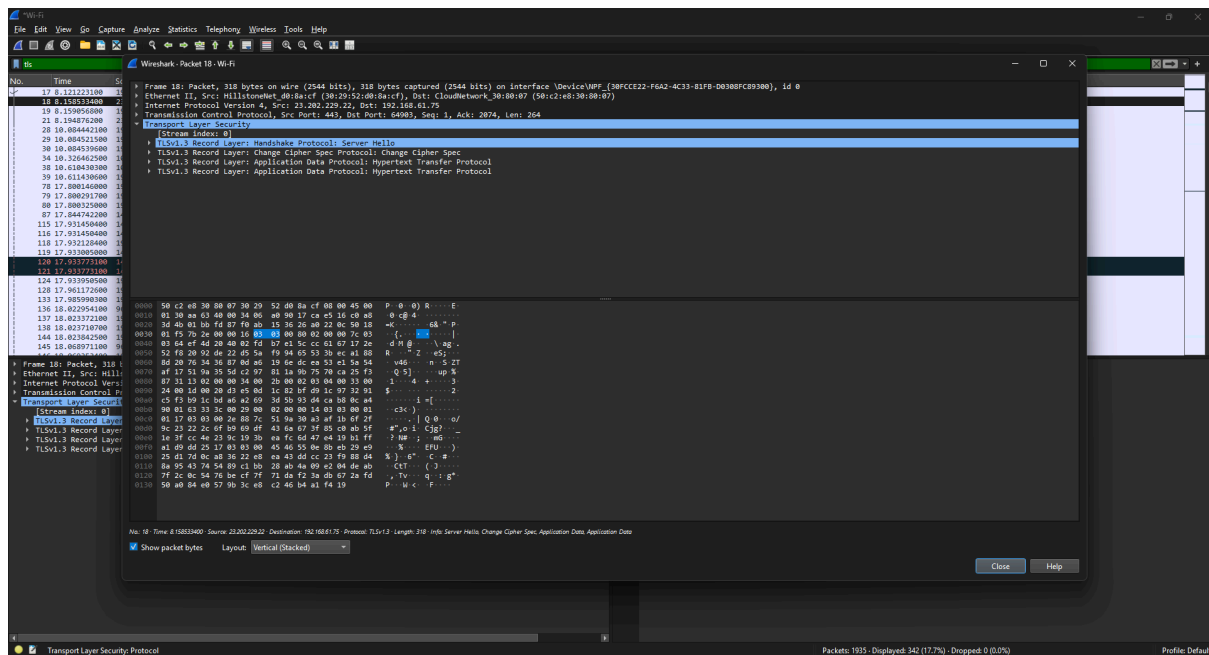

1. The Query packet shows my computer asking the DNS server to resolve a domain name into an IP address. The Response packet shows the DNS server successfully answering with the resolved IP address.

2. Destination Port: 53

3: TLS Handshake

1. The Client Hello starts the secure handshake, showing the browser offering supported encryption methods to the server. The Server Hello shows the server responding and agreeing on the encryption method to create a secure HTTPS connection.
2. Protocol used: TLSv1.3
3. Destination Port: 443
